INDUSTRIAL ROOFING - WARM - EXPOSED - BITUMINOUS MEMBRANE

WITH SOLAR PANELS

SPECIFIC WATERPROOFING SYSTEM OF INDUSTRIAL AND CIVIL ROOFS WITH A BITUMINOUS SUBSTRATE

SUBSTRATE PREPARATION
SYSTEM

 Substrate to be treated must be free from debris and dust. Clean the substrate by either water jetting or air blowing and/or brushing.

PRIMERS:

 PRIMER 0230, moisture curing polyurethane, to be applied by means of a roller or brush or airless spraying device (with consumption of 100-150 g/m^{2).} Over application time must be between 60 minutes and 16 hours according to environmental conditions

A rapid version called **PRIMER 0230 R** is c available, allowing rapid over application time also in cold conditions (0°C) within 10 minutes. This version also helps removing traces of residual humidity from <u>non absorbing substrates</u> (morning dew). Does not help with water ponding or ice.

• **STARCEMENT 5/A**, water based epoxy primer to be applied by means of a roller, or brush or airless spraying device (with consumption of 100-150 g/m²). Over application time must be between 60 minutes and 16 hours according to environmental conditions.

WATEPROOFING MEMBRANES:

STARFLEX HR-E, hybrid elastomeric polyurea system formulated with aromatic isocianates and special diammines, free from plastificants and solvents, or STARFLEX HR-S, fast hardening with a very fast attainment of the final mechanical characteristics, high resistance to the hydrolysis and the abrasion.

The products can be applied exclusively by spraying devices with two-component airless pumping units, equipped with a mixing gun, with a theoretical consumption of 2,2-4,4 Kg/m².

The necessary equipment must also include pre-heating the separate components at temperatures of at least 65-75 °C. The best results are obtained with pressures of at least 190-210 Bar, material temperatures of 75 °C with heated feeding pipes for the spray gun.

TOP COAT:

POLISTAR E/P, two component elastic polyurethane based UV- resistant, anti-skid and wear resistant protective coating, one component elastic aliphatic polyurea based top coat for manual application at a rate of 0,15-0,25 kg/m² per coat. The product for anti-slip can be added /charged with 0,1-0,3 mm quartz and or be broadcasted with 0,1-0,5 quartz on the first of the 2 top coats. When 2 coats must be applied do not let more than 48 hours between the coats.

Performance indicators	SCGHE

FEATURES

- High elasticity and abrasion resistance, wear resistance with the ability of crack-bridging.
- Waterproofing, excellent chemical resistance and corrosion resistance.
- Substrate application temperature range: from -20°C a +40°C.
- Operating temperatures from -30°C to +100°C.

		layer	Consumption Kg/mq	thickness DFT mm	Coverage cost g/micron
Primer	1	STARCEMENT 5/A	0,10	0,04	2
Primer	1	PRIM ER 02 30/0230R	0,15	0,06	2
waterproofing	2	STARFLEX HR-E	3,00	2,63	1
waterproofing	2	STARFLEX HR-S	2,20	1,93	1
top coat	3	POLISTAR E/P	0,30	0,13	2

Continues waterproofing membranes, concrete surfaces protection ideal for: Roofs, Renewing old membranes.
